

Shubham Kumar

Software Developer | DevOps Engineer

Faridabad, Haryana (Open to Relocate) | +91-7903609590 | shubham.kumarjuly@gmail.com | linkedin.com/in/shubham-kumar97

PROFESSIONAL SUMMARY

Software Developer and DevOps Engineer with over 1 year of hands-on experience building and deploying production web platforms, and automating cloud infrastructure and CI/CD pipelines. Proven track record of delivering multi-project web applications and supporting a university ERP system's maintenance and database infrastructure, hosting and scaling infrastructure on AWS, and containerizing applications with Docker for reliable, consistent releases. Skilled in Terraform, Kubernetes, Jenkins, and Ansible, with a strong focus on automation, reliability, and scalable system design.

TECHNICAL SKILLS

Cloud Platforms:	AWS, GCP
CI/CD:	Jenkins
Containerization:	Docker, Kubernetes, ECS, EKS, GKE
Infrastructure as Code:	Terraform, CloudFormation
Configuration Mgmt:	Ansible
Package Management:	Helm Charts
Scripting:	Bash, Python
Troubleshooting:	K8sGPT
Databases:	MySQL, Amazon Aurora
Web Technologies:	HTML, CSS, JavaScript, Node.js, React, MERN Stack, Tailwind CSS
Monitoring & Logging:	Prometheus, Grafana, CloudWatch
Version Control:	Git, GitHub

WORK EXPERIENCE

Software Developer — GOTOADMISSION.COM PRIVATE LIMITED

01 August 2025 – Present

- Architected and built multiple full-stack production websites — including apnanoida.com, apnabareilly.com, gotoplacements.com, and treefoundations.co.in — using React on the frontend and Node.js/Express REST APIs on the backend, independently owning UI and server-side logic across education, real estate, and NGO domains.
- Designed responsive, component-based UIs with React and Tailwind CSS, including dynamic business listing pages, contact and donation forms with client-side validation, and live weather widget integrations.
- Built and secured REST APIs in Node.js/Express for data retrieval, form submissions, and admin workflows, with structured error handling and input validation.
- Maintained and enhanced a React-based ERP system for Metro University, managing application data storage and retrieval on AWS S3 to support scalable and reliable data handling.
- Containerized and version-controlled ERP application releases using Docker, streamlining deployments and ensuring consistent, reliable rollouts across environments.
- Managed and updated the ERP's MySQL database on AWS — writing and optimizing SQL queries (SELECT, JOIN operations), implementing indexing strategies, and setting up backup and restore procedures for data reliability and disaster recovery readiness.

TECHNICAL EXPERIENCE

DevOps Intern — High Catch Private Limited, Bengaluru

March 2025 – June 2025

- Designed and maintained scalable AWS infrastructure using Terraform and CloudFormation, streamlining environment provisioning through reusable, version-controlled modules.
- Built and optimized Jenkins-based CI/CD pipelines to increase deployment frequency and reduce manual release effort.
- Implemented Prometheus and Grafana dashboards for real-time monitoring, improving the team's ability to detect and respond to production issues quickly.

- Streamlined containerization and orchestration using Docker and Kubernetes, improving resource utilization through right-sized deployments.
- Automated infrastructure provisioning with Terraform and Ansible, reducing manual configuration effort and infrastructure deployment time.

Environment: Python, Jenkins, Docker, Kubernetes, Helm Charts, Terraform, AWS, Ansible, Prometheus, Grafana, K8sGPT

PROJECT EXPERIENCE

FinanceMe – DevOps Implementation for a Banking Platform

March 2025 – June 2025

github.com/shubham7903/FinanceMe-Banking-project

- Designed modular Terraform configurations with remote state management to streamline environment provisioning across dev, staging, and production.
- Built Jenkins CI/CD pipelines with automated test gates and rollback triggers to reduce failed deployments.
- Enforced least-privilege IAM roles and centralized secrets management to meet banking-grade security and compliance requirements.
- Configured Prometheus and Grafana alerting for transaction-critical services to speed up incident response.

InsureMe – Cloud Optimization & Security for an Insurance Platform

github.com/shubham7903/InsureMe-insurance-project

- Optimized multi-cloud resource allocation using Terraform to reduce infrastructure costs without impacting availability.
- Migrated containerized workloads to Kubernetes using Helm charts to improve deployment consistency across environments.
- Configured autoscaling policies to absorb traffic spikes and maintain high application uptime.
- Built Jenkins-based deployment pipelines with staged rollouts to shorten release cycles and reduce customer-reported issues.

Medicure – Healthcare Compliance Platform

github.com/shubham7903/Medicure-health-care

- Built HIPAA-compliant infrastructure on Terraform with encryption at rest and in transit to streamline audit readiness.
- Containerized and deployed the application on Kubernetes, improving deployment speed and application scalability.
- Designed and tested a disaster recovery plan with automated backups to minimize downtime risk in the event of failure.
- Automated regression testing using Bash and Jenkins to increase test coverage and reduce manual QA effort.

EDUCATION

MCA	Punjab Technical University — CGPA: 7.93 2024
B.Sc. Mathematics	Kalinga University — 68% 2021

CERTIFICATIONS

- DevOps Certification — StarAgile
- DevOps Internship Certificate — High Catch Pvt. Ltd.
